FIELDMASTER®

PARKS & SPORTSGROUNDS ROLLER MOWERS

The Fieldmaster Story

Our equipment is designed and manufactured right here in New Zealand using the highest quality materials. Strength and reliability are built in, ensuring a low total cost of ownership and a nationwide dealership network with parts and support minimizes downtime and maximizes productivity. So if you're looking for equipment that, like you, isn't shy of hard work, choose Fieldmaster - every time.

FIELDMASTER

The Evolution of a Winning Concept

You know and trust Fieldmaster mowers. After all, we've been building top quality New Zealand machinery for over 50 years. We know designing a successful product is a task not to be taken lightly. After an extensive R & D programme, field testing and taking on board your suggestions, we've built the new 5000 Series. Stronger than ever, the 5000 Series is built to take the hard knocks in our conditions.

New Features

Using the latest 3D-CAD technology packages, we've engineered design solutions for years of trouble-free reliable use. The 5000 Series folded triangulated section deck is strong. Our conditions demand that. Our field trailing has proven the concept. We've developed our spindles – maintenance free bearings and lower labyrinth sealing prevents grass and foreign objects slowing your work.

The Deck

Utilising the latest design technology, we've crafted a deck of unequalled strength incorporating triangulation principles, using 5mm folded steel section. The 5000 Series is truly built for our conditions – to take the knocks and punishment in the real world.

Exclusive Twin Belt System

Fieldmaster exclusive twin belt drive offers delivery of power. Maximum belt wrap on each pulley ensures minimum slippage, and best cut results – especially during "flush" conditions. (excludes Mini park model)

The Philosophy

To build the best range of parks and reserves mowers for use in our conditions. To listen and respond to your feedback and to always develop and improve our products to suit your demands.

Preparation

Working in the toughest conditions demands machinery that lasts. The philosophy behind 5000 Series is "re-engineering from the ground up". With that in mind we've prepared the deck accordingly. Sand blasted and zinc coated to begin, then oven baked powder coat means years of corrosion resistance.

PARK MOWER

A multipurpose fine cutting roller mower designed for 40-80hp tractors to give a perfect cut – every time! A selection of 5x widths from 2.1m - 3.0m and twin or single roller models gives a great choice to keep sports fields, Parks & Reserves, airports and large estates looking beautiful!

MINI PARK MOWER

A fine roller mower, designed for smaller 15-40hp compact tractors. Available in twin and single roller models the Mini Park mower is a tough NZ built commercial mower for demanding use with smaller tractors.

VECTOR

The ultimate wide area folding roller mower for large areas. The 'vector' allows you to cover the big areas fast with speed, force and magnitude that's required on the job. With wing-float and hydraulic wing fold, the vector delivers what's required on the big jobs.
